

## EXPLOGEL

Explogel™ V is a revolutionary cartridge watergel explosive range that combines proven explosive technology with the proprietary Expan™ Ammonium Nitrate technology. The inclusion of Expan™ ensures a product with enhanced sensitivity and energy partitioning for improved advance and generally coarser fragmentation.

The Explogel™ range (which includes V-Series and Explosmooth) consists of six product grades; covering energies from 82% to 239% the energy of standard ANFO (Ammonium Nitrate Fuel Oil). The products are sold in individual cartridges, wrapped in a plastic sleeve which is crimped at both ends with an aluminium clip.
