

# EZ Trunkline™

## Description

The EZ Trunkline™ is mainly used in surface applications and can be used in conjunction with Primadet® non-electric delay products such as the EZ Det®. The EZ Trunkline™ is used with shock tube downlines only and therefore commonly used as a bridging device when problems are present or as a hook-up unit, especially in “air blast” sensitive areas, as it is considered “noiseless”. The EZ Trunkline™ system provide precise, reliable and millisecond accurate sequential blasting, in addition to a fast, simple and cost effective hook-up while allowing an unlimited number of holes to be shot with inherent sequential timing.

## Product information

Availability Region:	Sub Saharan Africa
----------------------	-----------------------

## Final product applications

**Quarry applications**  
**Construction blasts**  
**Blasting of open pit operations**
